SUMMARY

AI Engineer focused on building and improving scalable AI systems, with expertise in Generative AI, Computer Vision, and LLM-based pipelines. Experienced in developing end-to-end document processing systems (OCR, classification, LLM extraction) and optimizing performance for large-scale, on-premise deployments. Skilled in designing reliable, production-ready AI services with strong emphasis on system efficiency, evaluation, and integration.

SKILLS

- **Programming** : Python.
- **AI/ML** : LLMs, LangChain, OpenAI, Ollama, HuggingFace, Scikit-learn, PyTorch, TensorFlow, OpenCV, YOLO
- **AI Pipeline** : OCR Pipelines, Document Classification, LLM Extraction, Evaluation Systems, Data Processing
- **Data Stores** : SQL Server, PostgreSQL, S3-MinIO
- **Ops & Infra** : Git, Docker, Airflow, Kubernetes (KPO), AWS
- **Backend** : FastAPI, Flask, Node.js
- **Frontend** : React , Next.js.

WORK EXPERIENCE

GDP Labs

Mar 2025 - Present

AI Engineer

- Improved internal AI systems to enhance performance, scalability, and maintainability.
- Optimized end-to-end pipelines involving OCR, document classification, and LLM-based extraction.
- Standardized evaluation workflows and configurations to improve flexibility and reliability.

BPJS Kesehatan

Jun 2025 – Des 2025

AI Engineer

- Orchestrated scalable AI pipelines on Kubernetes using Airflow, improving reliability and observability.
- Scaled document processing to 216K+ claims per month and reduced latency from 5 seconds to 0.17 seconds.
- Built multimodal AI services for OCR, document classification, and LLM-based extraction, and improved validation systems for fraud detection.

DCSE UGM

Data Annotator

May 2024 – Jan 2025

- Collaborated with a team to develop an optimized image annotation strategy, improving data quality for object detection tasks

AI Research Assistant

Mar 2025 – May 2025

- Designed a semantic segmentation framework using multi-modal data.
- Developed pixel-wise segmentation models for Borobudur temple reliefs using architectures such as UNet, SegNet, PSPNet, and DeepLabV3+
- Established an evaluation protocol incorporating segmentation quality and reconstruction metrics.

ZONA FARM

Oct 2024 – Jun 2025

AI Engineer

- Developed a classification system to monitor chicken health, enhancing accuracy in poultry farming.
- Built an LLM-based chatbot with RAG to assist poultry farming operations

EDUCATION**UNIVERSITAS GADJAH MADA**

Aug 2021 – May 2025

Majoring in Electronics and Instrumentation

- GPA: 3.81/4.00
- Thesis: Automatic Waste Classification System Real-Time Object Detection-Based on Single Board Computer Using YOLO Algorithm.
